ID Card Systems

Axxess 28 offers a complete bureau service for those who do not want the hassle of managing or the expense with purchasing a complete photo ID system.

Our bureau utilises the latest in image capture and card printing technologies, in order to provide the best possible service with fast turnaround times, competitive prices and quality results. We use photo ID software which combines images and data and as this data is stored, reprints can be provided immediately.

Step 1 - Custom Card Design

The first part of our bureau service is to design the card following your design specifications and a proof will be provided for your approval. Artwork can be supplied in electronic format to our bureau

Step 2 - Photo and Card Holder Data Capture

Staff and contactor photos and data and other information are sent directly to our bureau service centre via email or secure courier on CD.

Step 3 - Card Printing

Cards can be printed in single or full colour, on one or both sides. We utilise the latest in high-definition image dye-sublimation card printing equipment for superb quality.

Axxess 28 Photo ID Systems

Axxess 28 supplies, installs and maintains photo ID systems from a basic package with entry level software, web cam and card printer to higher end SQL database client server systems with multiple workstations and professional ID cameras.
