For Reserving Access To Premises

Bewator Entro For Reserving Access To Premises

Bewator Entro is a unique system for reserving access to premises, using a reservation terminal or via the Internet. This is an ideal solution for:

- Company meeting rooms
- Premises for clubs and societies
- Conference facilities
- Sports and recreation centres (golf, tennis, squash courts, gyms, solariums).

Simple Reservation

People or groups of people needing access to a location can reserve their time using the reservation terminal outside the premises. All they need to do is hold up their personal access tag in front of the terminal to open the system and view which reservation objects and times that are available. To make a reservation is easy. A reservation confirmation can then be sent via e-mail, if desired.

You can also make your reservation via the Internet. After login with a personal code, a webpage appears displaying the different reservation objects and the times available for reservation. You

can then reserve the premises directly over the Internet. This is implemented using the latest encryption technology, guaranteeing the highest possible level of security.

Simple access to the premises

Upon arrival at the premises, you open the door using your personal access tag. Once a person has reserved the facility, all those who are part of the same group can come in at the designated time, using their own personal cards. This group could be the department of a company, a sports club, a family, etc.

Many possibilities

One system can have up to 64 reservation objects, which could be meeting rooms, squash courts, a solarium or a gym. All the reservable facilities have a timetable linked to them which can contain up to 24 time periods during one day. It is possible to vary the times for the various premises, so that a

In short, any facility where you want to allow people/groups to manage the reserving of premises themselves. Only those who have made a reservation have access to the premises during the time in question – they are able to open the door simply with their access cards, whilst the door remains locked to other individuals. The benefit of this system is that it minimises administration, whilst operators maintain full control of security and can monitor who has been in the premises at particular times.

solarium for example may have a time period of one hour. As an alternative to only being able to reserve certain set time periods, the Bewator Entro can be used to take advantage of so-called open reserving. This means that if you reserve yourself, you can decide how long you want to use the premises. The administrator can determine the earliest and latest times, but in between those times, you can reserve the premises for as long as you like. This is particularly useful for reserving conference rooms or meeting spaces, where you might need just a few hours, but the next meeting might require a full day.

The system can restrict the change of one person reserving more than a certain number of times during any one period. If someone does not use the facility reserved by a certain deadline, the slot is released for others to use. Caretakers and other assigned staff can always have access to the premises. If you want to know who has been on the premises at a particular time, the system can supply that information too. The system also has built-in machine control, which means that you can set the times when the lights should turn on in the conference room or in the squash court, for example. Bewator Entro offers endless possibilities.

Bewator Entro is also an access control system

The reservation system is part of the Bewator Entro access control system developed for companies and organisations requiring a high level of security as well as simple and user-friendly function.

The Bewator Entro system also allows you to combine control so that certain doors within a company are part of the access control system whilst others are controlled by the reservation system. One Bewator Entro system can handle up to 512 doors and 12,000 individuals. For more information, please ask for a copy of the Bewator Entro System brochure.
