

Access control

SiPass Entro 6 – open the door to comprehensive security

SiPass® Entro 6 provides comprehensive and highly coordinated access control for commercial and industrial premises, public institutions and residential buildings, single or multisite. With a number of exciting new features, most notably the ability to design and print personalized photo ID cards using its visual template design tool. In addition to this SiPass Entro 6.0 is now compatible with Windows Terminal Sever 2008 as well as Windows Vista. With smart connection to Siemens video surveillance systems there is one single point of control and monitoring. Able to handle up to 512 doors and 40,000 cardholders, this flexible system provides a multitude of features that make it easy to use and adapt to your specific requirements.

Answers for infrastructure.

SIEMENS

SiPass Entro 6 offers perfect adaptation to almost any environment

New Features include:

■ Photo ID card design and printing functionality

SiPass Entro 6 software now includes a visual template design tool for designing and printing personalized ID cards/badges. It Supports standard Windows printer drivers, and also makes it possible to create and print cardholder receipts that the cardholders can sign when their cards are issued.

■ Flexible configuration of common alarm outputs

When using a relay in the IOR6 as a common relay output, it is now possible to choose if that relay should work in pulse or toggle mode. If you want to follow the input you should select toggle mode. Then you can select if the alarm needs to be acknowledged at the point of the alarm. An acknowledgement can be performed by either a valid access by a caretaker or by the system administrator from the PC.

■ Support for Windows Server 2008

The following operating systems are supported by SiPass Entro 6.0:

- Windows Vista
- Windows 2000
- Windows XP
- Windows Terminal Server 2008
- Windows Terminal Server 2003

■ Documentation enhancements

The SiPass Entro documentation now includes fail-safe sections for the following actions:

- Upgrade of an existing Entro system
- PC replacement
- Expanding an existing Entro system with more segment controllers
- Replacement of a broken segment controller
- Replacement of a working segment controller

■ Integration with SISTORE™ DVRs

SiPass Entro includes integrated Digital Video Recorder (DVR) functionality that enables the seamless connection and operation of Siemens' SISTORE range of DVRs.

■ Emergency support

The system includes roll-call and anti-passback functionality that is invaluable in an emergency.

■ Cost-efficient and flexible

All versions of SiPass Entro are backward-compatible to allow for future expansions to meet changing needs.

Highlights

- Comprehensive standard access control
- Ideal for multi-site organisations
- Wide range of compatible readers
- Works with intrusion detection
- Integration with SISTORE DVRs
- Extensive range of external controls
- Emergency support
- Integrated reservation function
- Open system for easy integration
- User-friendly hardware
- Cost-efficient and flexible
- Reliable and robust
